

Nulink Remote System Management

Announcing Nubian's NuLink Remote Monitoring System, which is a flexible integration tool for a wide variety of instrumentation and equipment. NuLink is built on a proven industrial automation platform which allows Nubian to tailor the package to suit any sized system and budget.

The system can be used as a stand-alone device to monitor process variables, control pumps and valves, log data and can easily interface to any IT infrastructure thanks to its standardized protocols. Smart Phones (such as iPhone™, Android™) and PCs can easily be integrated into the system using Free, Downloadable Applications. Parameters can be remotely adjusted, saving time and call-out fees and regular SMS or Email alerts or statistical updates can be set.

Nubian's NuLink technology is the perfect partner for our Hydroguard Range of monitoring and control products.

The Nulink Remote Monitoring and Management System enables full system control via PC or Smart Phone App.

For a demonstration on the Nulink or Hydroguard systems or for any enquiries relating to Nubian's range of commercial and domestic products, please call our Australian team on +61 2 9647 2633.
