

Nubian drives water sustainability with Vehicle Wash Solution

Nubian's Vehicle Wash Solution encourages sustainable water practice and helps the vehicle industry cut costs associated with water

Sydney, 5 December 2011: Nubian has launched a Vehicle Wash Solution to assist the Australian vehicle industry with sustainable practices to protect water resources and reduce costs associated with water use.

The Vehicle Wash Solution uses Nubian's acclaimed and innovative greywater treatment system which recycles more than 80% of water used. The flexible, self contained system can be installed on site and removes the need for continuous water resource and related water permits which can be expensive for business.

Nubian installed their Vehicle Wash Solution system for vehicle hire firm Hertz in Albury, NSW and saved the company \$25,000. Hertz Albury needed to source an alternative wash solution after discovering a license to connect to the local sewerage system would cost \$33,000.

Tony Teggin, Owner of Hertz Albury, NSW comments; "The system saved us money and our monthly water bills are significantly lower. It allows Hertz to wash cars on site and because we are not using a continuous water supply we don't worry about the effects of drought. We are also proud to have minimised our environmental impact."

Barry Porter, CEO of Nubian comments; "Traditional hose methods can use up to 180 litres per car wash so it is vital vehicle firms look at alternative eco friendly methods. Nubian's Vehicle Wash Solution is just one of the ways we have committed to working with businesses in Australia to encourage sustainable water practices. With the many regulations and high costs associated with licenses and council permits our solution can also help a business significantly reduce the costs associated with using water and in turn encourage sustainability."

Benefits of Nubian's Vehicle Wash Solution:

- ✓ Reduces cost of operational licensing
- ✓ Reduces monthly water bills
- ✓ Installed on site saving valuable time and resource
- ✓ Minimises environmental impact

Nubian's Vehicle Wash Solution can be used at any commercial site where a vehicle needs to be washed. The quality of the water is not affected in any way and will produce the best car wash every time whilst at the same time protecting our country's precious water resources.

Tony Teggin concludes; "The main benefit is having a system installed on site saving my staff time and valuable effort. From an environmental point of view the system is brilliant."
